

 **TOYOTA HIACE**
oh what a *feeling!*

The Trademark of the Professional.

Getting the job done. The story of Toyota Commercial Vehicles.

Getting the job done. That's been our motto for more than half a century. No matter the terrain, no matter the weather, no matter the load, our engineers' pursuit of perfection will ensure we meet our mantra. At Toyota, we know that every job matters, and we know the quality, durability and reliability we promise is crucial.

There through thick and thin.

We've done it tough since day one. Back in 1958, on the slopes of the Snowies, our very first LandCruiser was used as a tool for thousands of Snowy Mountain Hydro Scheme workers. It got them to their worksite, and home again, every day. Their back-breaking work on unforgiving and unpredictable land was shouldered by this unbreakable workhorse. No wonder it's known as the 4WD that built Australia.

Now, more than 50 years on, we're still at work building the nation. Our commercial fleet is still getting the job done everywhere and more Australians rely on us than ever before. From cattle drovers to camel catches, boaties to brickies, our quality, durability and reliability is expected and we strive to deliver it through what we call 'Kaizen'; constant and continual improvement.

Work hard, work smart.

Practicality and durability, that's our pedigree but these days our commercial vehicles are as renowned as much for their intelligence as for their rugged exterior. Pop the hood or search the cab and you'll find our engineers have advanced the range with some ground-breaking achievements, like the KDSS suspension control that keeps the car steady on the shakiest of surfaces, or the state-of-the-art CRAWL system that keeps a firm grip on the toughest terrain.

You're also likely to experience more comfort features than ever before. Depending on the model you choose to get your job done, you'll have iPod^{®(1,3)} and Bluetooth^{™(2)} capabilities, flexible, easyfold seating configurations and the safety of SRS airbags – just an example of our restlessness for betterment.

We're committed to being a company with world values at heart. As such, the benefits of our pursuits go well beyond the driver when we develop vehicles which work for longer on less. New, fuel-efficient engines, give the same grunt you've come to expect, but more economically and more quietly than ever. So whether putting out fires in the big smoke, or putting in hard yards out bush, the only thing our vehicles aren't producing more of is emissions.

And still there's work to be done.

We boast the toughest, strongest, and smartest work vehicles ever made, because we've been there before. We've spent the last fifty years working to bring you the best vehicles to tackle the toughest terrain on Earth, and we'll continue to evolve and strive to make each Toyota better than the last.

HiAce has been building its reputation for longer than most have been building their businesses. And as any professional knows, when you build a better product, people stick with you.

For over 35 years, HiAce has been there for Australians no matter what the task. Toyota listened to what buyers wanted now and in the future, whether government, fleet or private operators and set out to build a van that would meet the high demands of its operators. HiAce is built to carry more and work harder than ever before, yet it's even nicer to get along with, because you're going to be spending a lot of time aboard this HiAce.

The engines are powerful, yet efficient. Longer service intervals for diesel engines reduce downtime, plus, petrol engines are LPG compatible for even greater flexibility. In the Long Wheelbase (LWB) and the Super Long Wheelbase (SLWB), there's more cargo carrying capacity than ever. The Commuter Bus has plenty of comfort features and carries 14 adults including the driver.

With typical Toyota Quality, Durability and Reliability (QDR), this is the vehicle you can stake your livelihood on. And wearing the HiAce badge, it projects a look of professionalism to your customers that will take your business to another level.

The power of high technology.

HiAce will move you and your load with two reliable engines, and they'll perform with impressive efficiency, vital in today's competitive business world where reduced running costs add up to greater profitability. You have the choice of a twin cam VVT-i equipped 2.7 litre petrol engine which is LPG compatible or a hard-working 3.0 litre turbocharged intercooled common rail diesel.

Advanced technology petrol engine.

The 2.7 litre petrol engine is the first twin overhead cam petrol engine in a HiAce. Variable Valve Timing with intelligence (VVT-i), normally only found in passenger cars, ensures greater flexibility and performance. This is especially helpful when driving a heavily laden vehicle. Peak power of 111kW comes in at a relatively low 4,800rpm with 241Nm of load-lugging torque at 3,800rpm. Twin counter-rotating balance shafts reduce vibration for smoother, quieter running. Countless innovations are also to be found throughout the engine, from the injection to the valve gear to the ignition system. What hasn't Toyota done to maximise engine efficiency and reduce friction emissions? The 2.7 litre petrol engine also meets strict Euro IV emissions requirements and ensures increased reliability and less maintenance down the track.

A high-technology diesel that delivers.

A turbo diesel engine is available across the HiAce range and this engine is purpose built for commercial vehicles – they're yet another powerful reason to choose HiAce.

The direct injection turbo diesel engine produces 100kW at 3400rpm and a lofty 300Nm of torque between 1200 and 2400rpm. This flat torque curve means this engine keeps pulling its weight all the way up the rev range. Being a common rail diesel engine, fuel is pumped at extremely high pressure for better atomisation and lower fuel consumption. So you'll feel the benefit behind the wheel and on your bottom line. This twin cam engine design with electronic engine management ensures greater fuel efficiency, smoothness and quieter running. Optimum use of Exhaust Gas Recirculation (EGR) reduces and controls Nitrous Oxide emissions, while the electronic 'drive-by-wire' throttle system makes for easier driveability.

Smooth operator.

Nippy handling, safer cornering.

Toyota didn't just stop at high performing engines. Hard-working suspension and steering mean HiAce handles responsively, is quiet and is easier to get along with. So hopping from job to job will be a breeze. Power-assisted rack & pinion steering offers greater road feel and more precise turning in tight spots. The rack stroke and steering angle have been optimised to reduce the turning circle. An aerodynamic front bumper with air dams each side, plus careful suspension tuning have also enhanced straight line stability and turning. The double-wishbone type front suspension with long torsion bars offers a comfortable ride, maximising wheel travel and suspension life. So after long days in the saddle, you'll be pleased you're in a HiAce.

Smoother transmissions.

Whichever engine you choose, Toyota has developed transmissions perfectly suited to the engines. You have the option of a 5-speed manual transmission or there's also a 4-speed, electronically controlled (ECT) automatic transmission offering improved shift feel and reduced shift shock, for smoother acceleration. The gated shift ensures precise gear selection, and an electronic shift lock and key interlock mechanism aids safety. The shifter is conveniently located on the dash, so you can move around the cab more easily.

Long Wheel Base model shown.

Space travel.

With longer wheelbases than ever before, the LWB and SLWB HiAce models have incredible interior space. The more squared off overall body design not only looks more stylish and professional, it optimises the interior room.

The radiator and engine has been pushed forward to optimise interior room, while the small bonnet allows easy checking of fluids. The smart body design of the LWB means a large 6.0 cubic metres of cargo capacity whilst the SLWB van, with its wider body and higher roof, has a full 9.8 cubic metres of cargo volume, making it the biggest HiAce van ever.

Each vehicle's longer wheelbase means the wheels are moved towards each end of the vehicle, which also means greater straight line stability.

Easy loading, fast getaways.

Let's face it, whenever you're unloading you're in a hurry, in a congested street or in a loading zone. To help make life easier, remote central locking is standard and the side door openings have also been made suitably wide enough for easier kerbside access. In the SLWB, there are sliding doors on both sides, while three interior lights

(two in the cargo area) help you see what you're doing after dark. With HiAce's slim tail lights, the width of the rear door opening is maximised for easier loading and unloading. Plus a strap incorporated on the inside of the rear door of LWB and SLWB vans helps you with pulling down the rear door when you're done. Additionally, on every model, drivers have a rear door mounted reversing mirror for added vision.

Comfort without stops.

Hard working days will no longer be hard labour. Air conditioning with a clean air filter is fitted as

standard, while the ease of power steering and supportive seats help reduce fatigue. In the Commuter Bus, passengers will enjoy a rear cooler ventilation system with overhead directional outlets. The ergonomic three-dial instrumentation cluster has two electric trip meters for mileage checking and power front windows making paying tolls less taxing.

A power sliding door is also available as an option on Commuter bus, which allows for easy access to the rear passenger area in one of three simple ways: by grabbing the inner or outer door handle;

via a switch located on the instrument panel; or simply by pressing a button located on the vehicle key.

There are plenty of storage recesses to reduce cabin clutter, with document or map storage in the moulded front door pockets and glovebox. The centre seatback on van models folds forward, offering a handy table with two cupholders for your lunch, or a foldout tray to hold order books or clipboards. If you get thirsty, retractable dual cupholders in the dash and bottle holders built into the front door trims help keep your drinks secure.

The HiAce's standard audio system is an MP3 compatible CD player with AM/FM radio, USB audio input for some iPod[#] and USB sticks[^], as well as Bluetooth[™] capabilities. The 2 speaker system in the van models or 4 in the bus are accompanied by full length headlining which helps to reduce ambient noise. This means those long days on the road can still be entertaining.

Dual front SRS airbags.

Safer working conditions.

HiAce benefits from Toyota's two decades spent developing safer chassis design for 'one-box' (from vans to people movers) vehicles. The most advanced Computer Aided Engineering (CAE) tools were employed to develop an advanced body design. This helped HiAce achieve excellent safety standards. Tests included Full Lap Front Collision Impact Testing and Offset Deformable Barrier Testing for the Van and Bus. Numerous reinforcements are integrated at key locations throughout the body design. A unique vertical Y-frame or 'crocodile' design of the front chassis rails helps absorb impact energy. Front upper members increase impact absorption ability. The front frame members have been straightened to increase impact absorbing ability. Side members are double layered to disperse and absorb crash impact energy.

There are front bumper reinforcement and reinforcement beams in the front doors. We even went as far as developing a mechanism which moves the brake booster away in a collision. Standards of occupant restraint have also been increased. Dual front SRS airbags are fitted as standard, plus the driver and front passenger seats have Emergency Locking Retractor (ELR) type seatbelts.* They incorporate pre-tensioners which lock up in a collision and force limiters to relieve the pressure on the upper torso. In the Commuter Bus, all rear seats also have 3 point ELR seatbelts.

Superior active safety systems.

Hard-working brakes, impressive handling, dynamic stability and reduced chance of driver fatigue are just some of the ways Toyota helps you avoid danger. Anti-skid Braking System (ABS) with Brake Assist (BA) which supplements your braking effort during sudden stops is standard across the range#.
